

# Performance Module

## The Insight You Need for Ultimate Website Performance

Make your website faster and see how it is experienced by visitors in different locations and those using different devices and network speeds.

Monsido's Performance module allows you to automatically identify elements that slow down your website and prioritize issues identified based on potential impact and difficulty.

Scanning for Google Web Vitals metrics, understand your website's content loading speed, interactivity, and visual stability.

## Key Features

### Real-Time Performance Score

Get a pulse on your overall website performance score (0-100) based on Google Web Vitals.

### Experience Page Experience Insights by visitor profile

Gain a comprehensive understanding of all measures that affect your site performance based on a visitor's location, network speed, and device.

### Prioritize by impact or by difficulty

Get easy-to-understand recommendations for all issues identified and sort by priority or by difficulty to balance quick fixes with those that will have the biggest impact.

### Monitor your progress

See the history of all performance metrics over time to understand how your website activity impacts Core Web Vitals.

Monsido has offices in the United States, United Kingdom, Australia, and Denmark. For more information, visit [www.monsido.com](https://www.monsido.com)

## Improve website performance

Optimize site performance with real-time Core Web Vital insights across different visitor profiles and get customized recommendations that will make an impact, fast.

## Keep on top of Page Experience

Website performance goes beyond just load speed. Nothing frustrates a user like a page that jumps around or is unusable even though it has been visually loaded. Use your performance score and metrics to improve how quick your content is available for interaction and how visually stable the page is upon loading.

## Reap the benefits of good site performance

The faster and more stable a page is, the higher conversion you can expect. What's more, Google's Page Experience Algorithm update looks specifically at how sites perform across Core Web Vital metrics.
